

Connect Alexa Smart Home Skills to Alarm.com

Requirements

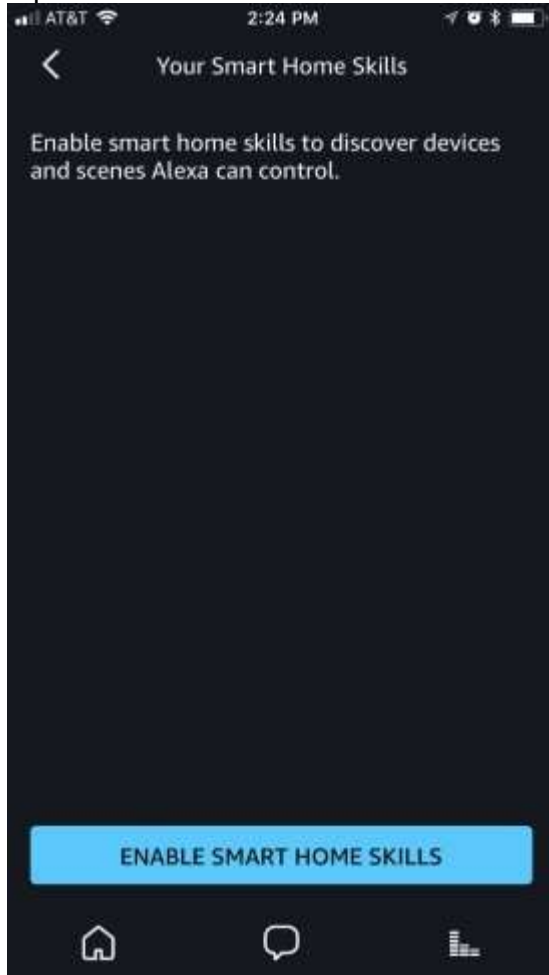

- A customer account powered by Alarm.com.
- Lights and/or thermostats powered by Alarm.com.
- An Amazon Alexa device and associated Amazon customer account.

To connect the Alexa Smart Home Skills to an Alarm.com account:

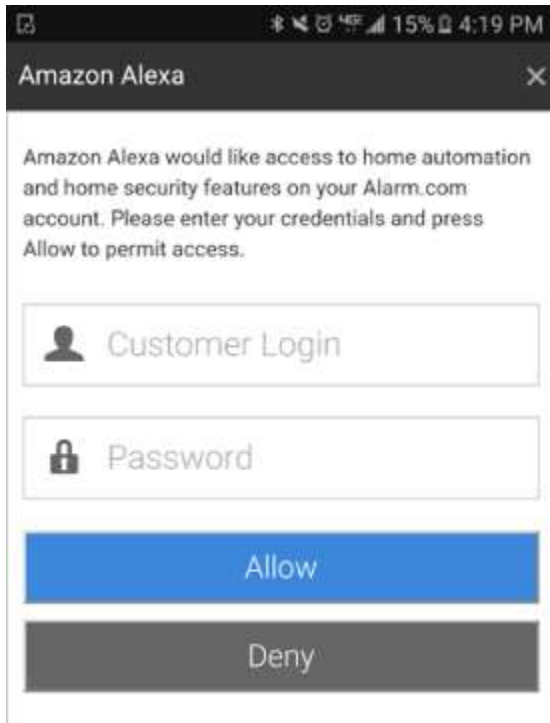

1. Open the **Alexa app on your mobile device** or navigate to **alexa.amazon.com** and login with the Amazon credentials associated with your Amazon account.
2. Tap the **Smart Home tab** in the left side navigation menu.
3. Tap **Your Smart Home Skills**.

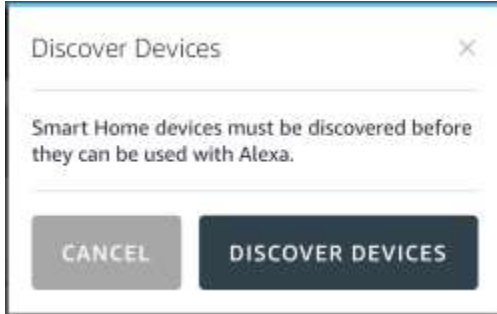

4. Tap **Enable Smart Home Skills**.

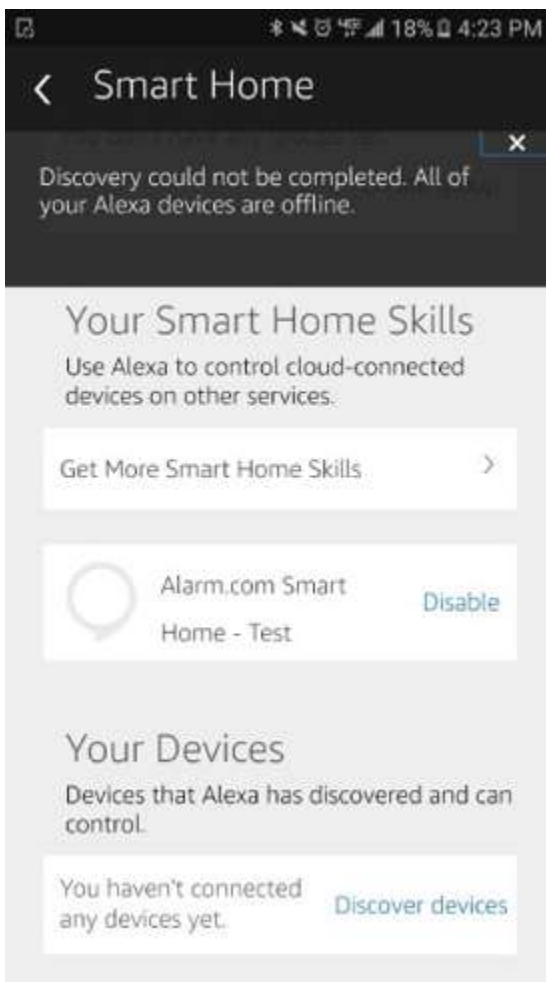

5. Log in **with your Alarm.com account credentials** and tap **Allow**. If the login is a success, you will see the confirmation screen. Tap the **x** to leave the confirmation screen.

6. Now that you have turned on the skill, you need to **discover your thermostats and lights**. There are three ways to do this:
- When you tap the **x** on the confirmation screen, a pop-up window will appear. Tap **Discover Devices**.

- Return to the **Smart Home** tab and tap **Discover Devices** under the **Your Devices** header.

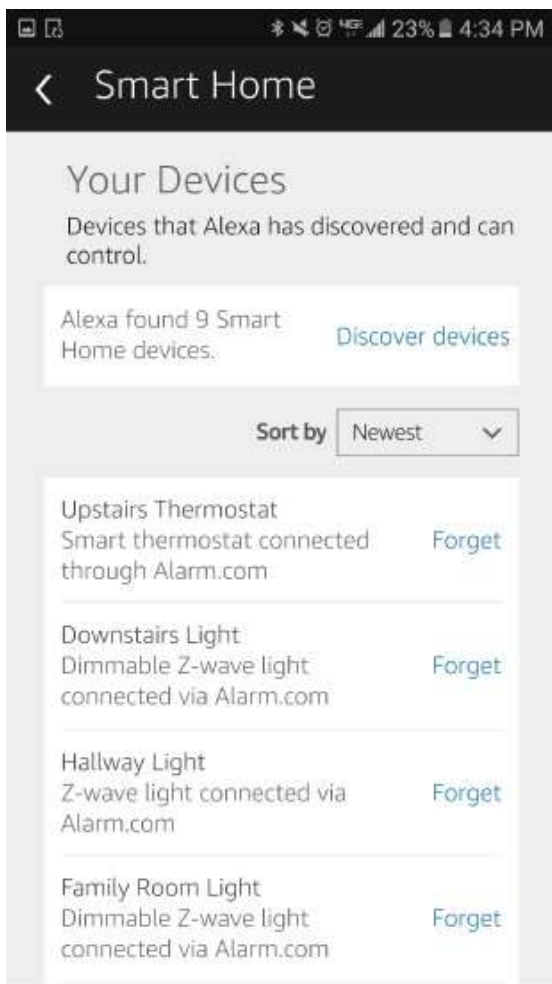

- Ask Alexa. Say "**Alexa, discover my devices**".
8. If you discovered devices using the app or a Web browser, you will see a **pop-up window confirming that Alexa is looking for your devices**. If you asked Alexa, you will hear a confirmation message. This process usually takes up to 20 seconds.

Note: If a light or thermostat does not appear, please ensure the device is plugged in and has an "OK" status on the Alarm.com Customer Website.

9. After the discovery is complete, your devices will appear in the **Your Devices** list.

10. Now you can enjoy your lights and thermostats with Alexa and the Alarm.com Smart Home Skills.
